### Endometrial Carcinoma

#### ENDO-4

**Institutional review comment:**
For surgically staged: Stage I; G3 tumors, Consider adding systemic therapy to the radiation recommendations.

**Panel Discussion/References:**
Based on a review of data and discussion, the panel consensus supported adding systemic therapy as follows:
- For Stage IA (<50% myometrial invasion); Adverse risk factors present; G3: “Vaginal brachytherapy and/or EBRT ± systemic therapy (category 2B)”
- For Stage IB (≥50% myometrial invasion); Adverse risk factors not present; G3: “Vaginal brachytherapy and/or EBRT ± systemic therapy (category 2B)”

**Vote:**
- YES: 11
- NO: 8
- ABSTAIN: 2
- ABSENT: 7

---

#### ENDO-4

**Institutional review comment:**
For surgically staged: Stage IB; Adverse Risk Factors present; G3 tumors, discuss the category 2B recommendation based on GOG 249.

**Panel Discussion/References:**
Based on a review of data and discussion, the panel consensus supported changing the systemic therapy category recommendation from category 2B to category 2A:
- For Stage IB (≥50% myometrial invasion); Adverse risk factors present; G3: “EBRT and/or vaginal brachytherapy ± systemic therapy (category 2B for systemic therapy)”

**Vote:**
- YES: 18
- NO: 2
- ABSTAIN: 2
- ABSENT: 7

---

#### ENDO-9

**Institutional review comment:**
Suggest removing “Consider chemotherapy (category 3)” as a treatment option for isolated metastases.

**Panel Discussion/References:**
Based on a review of data and discussion, the panel supported removing the recommendation “Consider chemotherapy (category 3)” as a treatment option for isolated metastases found after surveillance.

**Vote:**
- YES: 21
- NO: 0
- ABSTAIN: 0
- ABSENT: 7

---

#### ENDO-B

**External Submission from Myriad Genetic Laboratories, Inc.:**
Suggest revising the final bullet point discussing genetic counseling and testing in the “Hysterectomy and Pathologic Evaluation” section to include patients who meet criteria for Lynch syndrome. (See submission for proposed language)

**Panel Discussion/References:**
Based on a review of data and discussion, the panel did not use language proposed in the submission. However, the panel supported adding the following language: “For those who are MMR-negative or those who have not been screened, but who have strong family history of endometrial and/or colorectal cancer, genetic counseling and testing for patients is recommended. (See Lynch syndrome/HNPCC in the NCCN Guidelines for Genetic/Familial High-Risk Assessment: Colorectal).”

**See submission for references.**

**Vote:**
- YES: 21
- NO: 0
- ABSTAIN: 0
- ABSENT: 7
Panel Discussion/References

**Endometrial Cancer (UTSARCB)**

Institutional review comment: Add albumin-bound paclitaxel to the list of single-agent chemotherapy options.

Based on a review of data and discussion the panel supported adding albumin-bound paclitaxel to the list of single agent chemotherapy regimens for recurrent, metastatic, or high-risk disease with a footnote, "Albumin-bound paclitaxel is a reasonable substitute for patients with a hypersensitivity to paclitaxel if the skin testing to paclitaxel is negative. If the patient has a positive skin test to paclitaxel then the patient requires desensitization to paclitaxel. Albumin-bound paclitaxel is not a reasonable substitute for paclitaxel if the patient’s skin test is positive."

**Uterine Sarcoma (UTSARC-B)**

Institutional Review Request: Suggest revising the systemic therapy page to include a preferred list of therapies.

The panel supported reorganizing the systemic therapy page into the following categories
- Preferred therapies
- Other combination regimens
- Single-agent options
- Other hormone therapies
