| HODG-6/HODG-7 Internal request: Institutional review comment to consider dropping the use of bleomycin after 2 cycles of ABVD for patients with the following:  
  - Stage I-II unfavorable non-bulky disease, if Deauville 1-2 after restaging  
  - Stage I-II unfavorable, bulky mediastinal disease, or >10 cm adenopathy, if Deauville 1-3 after restaging  
  - Stage I-II unfavorable, non-bulky disease, if Deauville 5 and biopsy negative | Panel consensus supported dropping the use of bleomycin after ABVD x 2 cycles for stage I-II unfavorable non-bulky disease, if Deauville 1-2 after restaging. The following option has been included: “AVD x 4 cycles +/- ISRT”.  
Panel consensus supported dropping the use of bleomycin after ABVD x 2 cycles for stage I-II unfavorable, bulky mediastinal disease, or >10 cm adenopathy, if Deauville 1-3 after restaging. The following option has been included “AVD x 4 cycles +/- ISRT”.  
Panel consensus supported dropping the use of bleomycin after ABVD x 2 cycles for stage I-II unfavorable, non-bulky disease if Deauville 5 after restaging and biopsy negative. The following option has been included “AVD x 4 cycles + ISRT”. | YES NO ABSTAIN ABSENT |
