

NCCN Trends™ is an analytics tool from the National Comprehensive Cancer Network® (NCCN®) that surveys how clinicians across the U.S. and around the globe are delivering cancer care. This summary includes the results of the October 2011 NCCN Trends™ Survey, which focused on Breast Cancer. This survey was sent to U.S. and International users of NCCN.org.

DEMOGRAPHICS

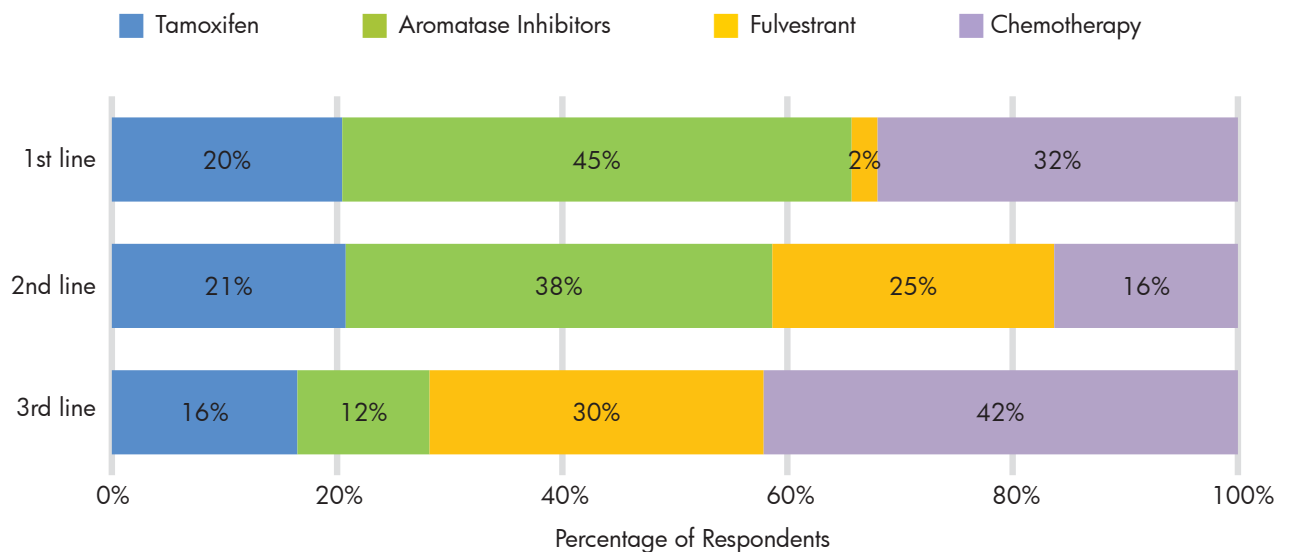

Distribution of Respondent Types (n = 1,651)

Q1. Do you treat patients with HR+, metastatic breast cancer? (n = 1,651)

Q2. During the past 3 months, what is your most frequently used drug sequence for the treatment of post-menopausal patients with HR+, newly diagnosed, metastatic breast cancer: (n = 658)†

†Note: Percentages may not total 100 because of rounding

Results: October 2011
BREAST CANCER

Q2. During the past 3 months, what is your most frequently used drug sequence for the treatment of post-menopausal patients with HR+, newly diagnosed, metastatic breast cancer:

Top 25 Treatment Sequences by Geography

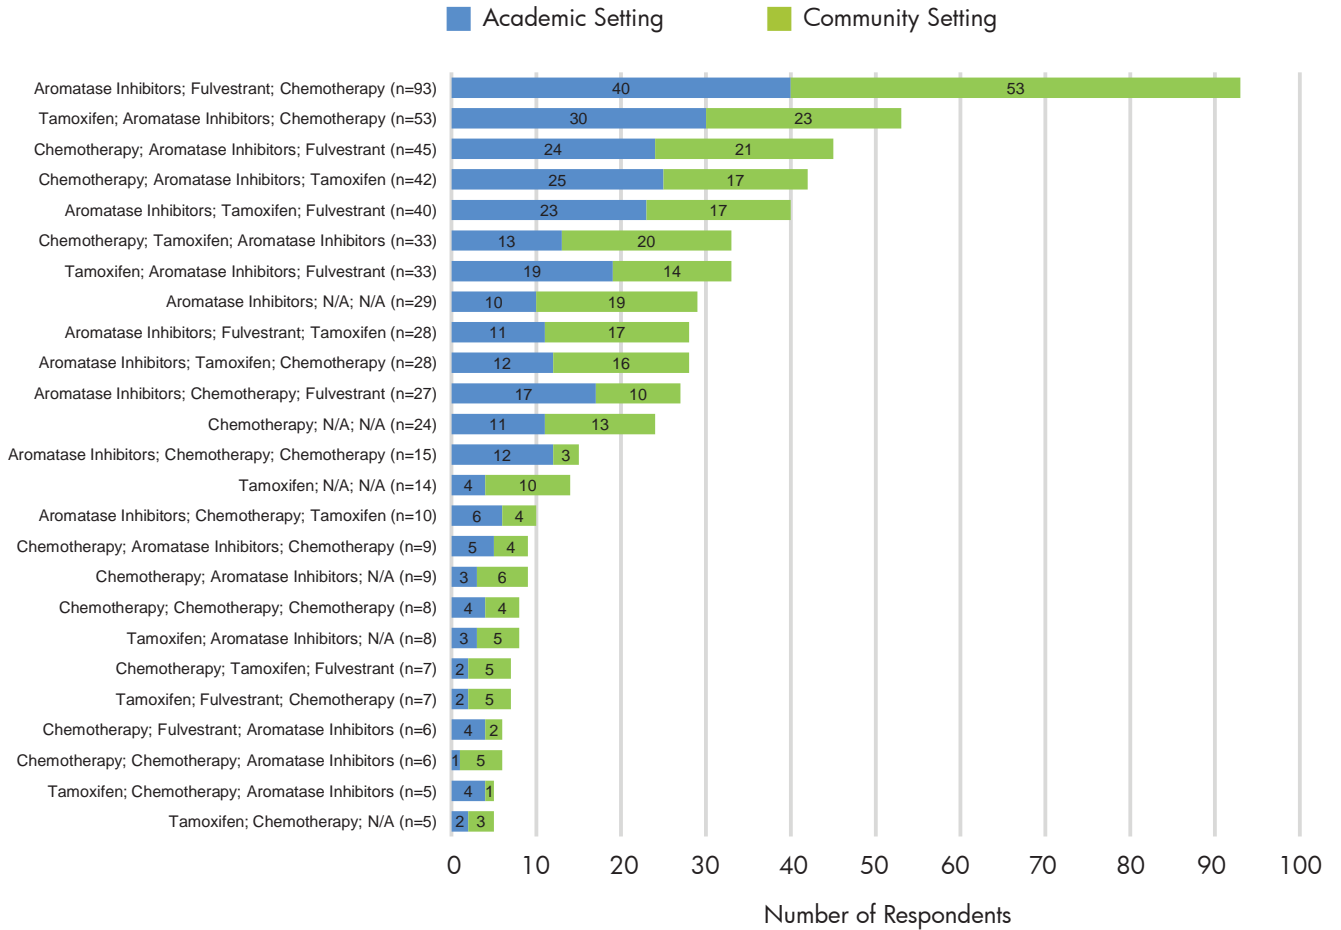

Q2. During the past 3 months, what is your most frequently used drug sequence for the treatment of post-menopausal patients with HR+, newly diagnosed, metastatic breast cancer:

Top 25 Treatment Sequences by Practice Size

Q2. During the past 3 months, what is your most frequently used drug sequence for the treatment of post-menopausal patients with HR+, newly diagnosed, metastatic breast cancer:

Top 25 Treatment Sequences by Practice Setting

Q2. During the past 3 months, what is your most frequently used drug sequence for the treatment of post-menopausal patients with HR+, newly diagnosed, metastatic breast cancer:

Top 25 Treatment Sequences by Specialty

■ Medical Oncology
 ■ Radiation Oncology
 ■ Surgical Oncology
 ■ Internal Medicine
 ■ General Surgery
 ■ Other

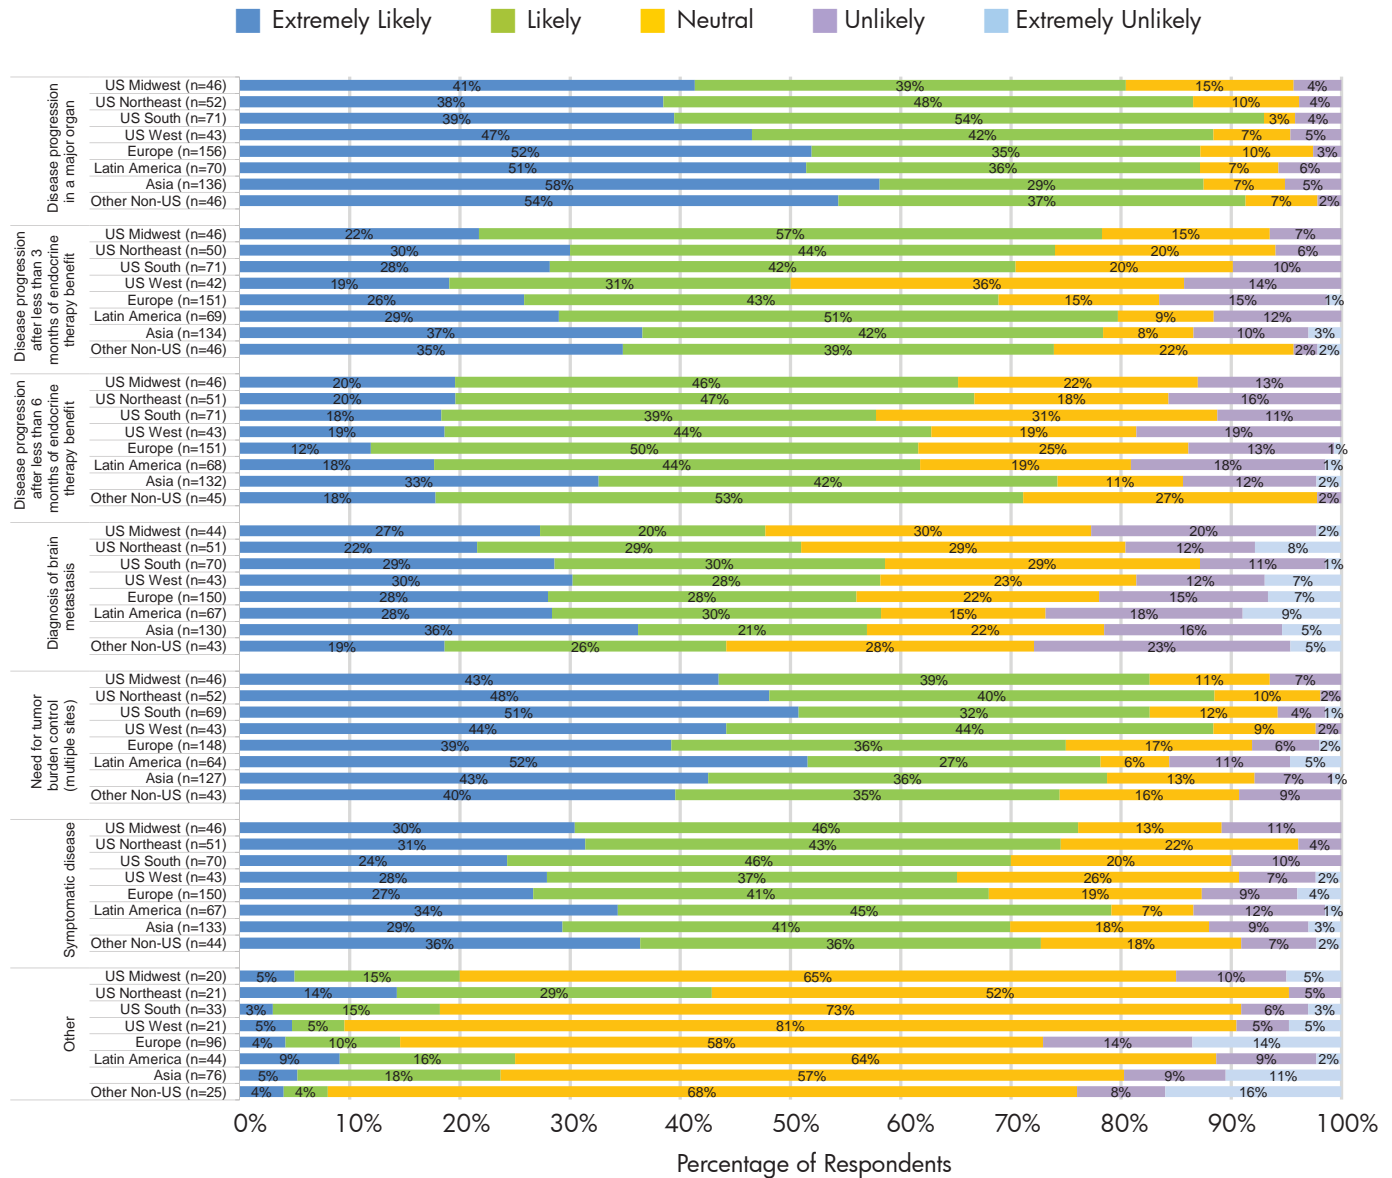

Q3. How likely are you to switch from endocrine therapy to chemotherapy in post-menopausal patients with HR+ metastatic breast cancer in the following clinical scenarios? (n = 638)†

†Note: Percentages may not total 100 because of rounding

Q3. How likely are you to switch from endocrine therapy to chemotherapy in the following clinical scenarios?

By Geography†

NCCN Trends™ is an analytics tool from the National Comprehensive Cancer Network® (NCCN®) that surveys how clinicians across the U.S. and around the globe are delivering cancer care. NCCN Trends™ surveys are designed to reach targeted populations that can include several thousand clinicians as a potential sample size. NCCN can also provide analytics on existing NCCN Trends™ and clinician demographic data sets, allowing for greater insight into oncology practice patterns.

To commission an **NCCN Trends™** survey, to discuss analytic and data services, or to request information on other NCCN programs and resources, please contact:

National Comprehensive Cancer Network® (NCCN®)

The National Comprehensive Cancer Network® (NCCN®), a not-for-profit alliance of 21 of the world's leading cancer centers, is dedicated to improving the quality and effectiveness of care provided to patients with cancer. Through the leadership and expertise of clinical professionals at NCCN Member Institutions, NCCN develops resources that present valuable information to the numerous stakeholders in the health care delivery system. As the arbiter of high-quality cancer care, NCCN promotes the importance of continuous quality improvement and recognizes the significance of creating clinical practice guidelines appropriate for use by patients, clinicians, and other health care decision-makers. The primary goal of all NCCN initiatives is to improve the quality, effectiveness, and efficiency of oncology practice so patients can live better lives.
