

GLOBAL

ADVANCING QUALITY CANCER CARE AROUND THE GLOBE

CLINICAL RESOURCES

The influence of NCCN content continues to gather momentum throughout all regions of the world, with more than 10 million copies of the NCCN Clinical Practice Guidelines in Oncology (NCCN Guidelines®) downloaded worldwide in 2018.

The NCCN Guidelines® document evidence-based, consensus-driven management to ensure that all patients receive preventive, diagnostic, treatment, and supportive services that are most likely to lead to optimal outcomes.

The NCCN Guidelines provide recommendations based on the best evidence available at the time they are derived. Because new data are published continuously, it is essential that the NCCN Guidelines also be continuously updated and revised to reflect new data and clinical information that may add to or alter current clinical practice standards. The NCCN Guidelines assist in the decision-making process for all those involved in cancer care—physicians, nurses, pharmacists, payers, patients and their families—to improve patient care and outcomes.

NCCN GUIDELINES TRANSLATIONS

[NCCN Guidelines available in multiple languages](#)

Today, more than 40 countries have requested translations of NCCN content in their native languages. Through support from outside organizations, NCCN Guidelines and NCCN Guidelines for Patients® have been translated into several languages, such as: Chinese, Czech, French, German, Italian, Japanese, Korean, Polish, Portuguese, Spanish, and Turkish. This allows NCCN to assist in breaking language barriers to NCCN Resources.

NCCN GUIDELINES REGIONAL ADAPTATIONS

NCCN Guidelines modified for specific regions and countries

The NCCN adaptations account for metabolic differences in populations, accessibility of technology, and regulatory status of health care technologies used in cancer management in the specified country/region. NCCN has ongoing adaptation collaborations with oncology thought leaders across the globe.

NCCN FRAMEWORK™

NCCN Guidelines stratified by resource level

NCCN Framework for Resource Stratification of NCCN Guidelines (NCCN Framework™) guide evidence-based adaptation to available clinical treatment resources, define appropriate treatment pathways based on available resources—Basic, Core, Enhanced, and NCCN Guidelines—and deliver a tool for health care providers to identify treatment options that will provide the best possible outcomes given specific resource constraints. The library of NCCN Framework™ now covers a vast majority of global cancer cases.

NCCN HARMONIZED GUIDELINES™

NCCN Guidelines for specific resource-constrained locations

The NCCN Harmonized Guidelines™ are targeted regional resources created as part of a collaborative effort to combat the skyrocketing cancer rates and unique care circumstances. They represent both the optimal care that low- and mid-resource countries aspire to provide and pragmatic approaches that provide effective treatment options for resource-constrained settings of specific regions.
