NCCN SUPPORTIVE CARE:
1. Emetic Risk: Day 1 High
2. Fever Neutropenia Risk: Intermediate

CHEMOTHERAPY REGIMEN
21-day cycle for 4 cycles

• DOXOrubicin 60 mg/m² IV Push on Day 1
  See Safety Parameters and Special Instructions for information on slow IV Push administration.

• Cyclophosphamide 600 mg/m² IV over 30 minutes on Day 1
  Oral hydration is strongly encouraged with cyclophosphamide; poorly hydrated patients may need supplemental IV hydration.
  Patients should attain combined oral and IV hydration of 2 – 3 L/day on day of chemotherapy.
  See Other Supportive Therapy for example of recommended hydration.

This course is 4 cycles of AC (DOXOrubicin and cyclophosphamide) Every 21 Days.
DOCEtaxel Every 21 Days and trastuzumab course is initiated following completion of this course.
Please see Order Template BRS27b for DOCEtaxel Every 21 Days and trastuzumab course.

PRN for breakthrough: Patients should be given at least one medication in a different category than that given above to have as needed for breakthrough. Please consult the NCCN Clinical Practice Guidelines in Oncology™ Antiemesis for appropriate antiemetic therapy.

Myeloid growth factor therapy (See www.nccn.org/professionals/physician_gls/PDF/myeloid_growth.pdf)

CSFs not generally recommended as primary prophylaxis based on FN risk of chemotherapy regimen. For more information on prophylaxis of FN, refer to NCCN Clinical Practice Guidelines in Oncology™ Myeloid Growth Factors and Appendix C to the NCCN Chemotherapy Order Templates.

Other Supportive Therapy

- For cyclophosphamide: Example of recommended hydration: Sodium chloride 0.9% infused IV at a rate of 1.5 – 3 mL/kg/hour for a total of 500 mL on day of chemotherapy.

MONITORING AND HOLD PARAMETERS

- CBC with differential should be assessed routinely for potential dose evaluation.
- For DOXOrubicin:
  - DOXOrubicin is an anthracycline. Cumulative anthracycline dosage should be monitored.
  - Ejection fraction should be assessed prior to initiation of treatment and as clinically indicated.
  - Liver function should be assessed prior to each cycle for potential dose evaluation.
- For cyclophosphamide: Renal function should be assessed prior to each cycle for potential dose evaluation.

SAFETY PARAMETERS AND SPECIAL INSTRUCTIONS

- For DOXOrubicin:
  - DOXOrubicin is a vesicant.
  - This agent is administered IV Push. The preferred IV Push method for a vesicant is administration through the side port of a freely flowing IV; alternatively, the drug can be administered via direct IV push.
- For aprepitant and fosaprepitant: Refer to Appendix D for specific information regarding associated drug interactions.
